

Maintenance Performance Toolbox Authoring Module

Authoring Module

The Authoring module provides the ability to modify manufacturer maintenance documents. It integrates customer-configured data and existing data for a user-friendly and easy-to-navigate database.

Incorporating Airline Best Practices to Optimize Efficiency

The Authoring module helps you to:

- Create and customize maintenance documentation to capture and reuse airline best practices
- Visually identify supplemental data and customer-oriented changes
- Seamlessly incorporate your supplemental documents into the original equipment manufacturer (OEM) content

Key benefits

- Modification of OEM documents to meet operator-specific needs
- Real-time incorporation of operator-originated changes through online access
- Automation of approval routing and notification
- Electronic publishing and revision management

Key notes

- Requires the Library module
