

Fuel-Efficiency Solutions Emissions Reporter

Fuel-Efficiency Solutions

Emissions Reporter

The Boeing Emissions Reporter is an easy-to-use CO₂ emissions reporting tool for business and commercial aviation operators of all sizes and all fleets. This smart new application is part of Boeing's suite of fuel-efficiency solutions, which offers broad opportunities to reduce fuel consumption, costs, and emissions. The Emissions Reporter accurately manages data from thousands of flights to ensure compliance with regulations, to meet the needs of operators, data verifiers, and regulators.

Capture, organize, and report emissions data accurately and easily.

Operators affected by the European Union Emissions Trading Scheme (ETS) must regularly submit emissions and tonne-kilometer reports. Inaccurate reporting may result in significant losses of carbon credits and in heavy fines.

The Emissions Reporter ensures accuracy and consistency by

- Comparing flight plans and expected fuel usage with recorded data and Eurocontrol records.
- Including a full database of aircraft types and airports throughout the world.
- Including flight planning and flight-management data to cross-check against calculated fuel use.
- Optimizing and automating the process of data verification.

With the Emissions Reporter, you are in control. You can ensure quick and easy emissions reporting with simplified, streamlined report preparation and auditing.

- Auditors can examine flight data without costly on-site visits.
- A virtually self-auditing system flags errors, making them easy to identify and fix.
- ETS-relevant data is easy to understand and is cost effective to manage.
- This secure system, compatible with existing infrastructure, is web-based through the MyBoeingFleet web portal and accessible 24 hours a day 365 days a year.

Fuel-Efficiency Solutions

Boeing provides add-on consulting services to help you determine the best approach to maximum savings.
