Future Air Navigation System (FANS) Computer Based Training (CBT)

In the ever-changing world of airline transport operations, there is a continual need to incorporate additional technologies. Boeing recognizes these advancements and the need to train to them.

A large number of your Boeing airplanes have capitalized on this escalating technology trend by integrating additional capability into the flight deck. One of these important advancements is Future Air Navigation System, also known as FANS. Our Boeing developed FANS CBT is purpose-designed modular courseware. It only requires a half day to complete and is conveniently accessible anywhere a computer network is available. The course complies with FAA Advisory Circular 120-70B training requirements as well as guidance in the ICAO Global Operational Data Link Document (GOLD). Our FANS CBT offers comprehensive instruction at the level of expertise customers expect from Boeing.

This model-specific training covers:

- Controller-Pilot Data Link Communication (CPDLC)
- Automatic Dependent Surveillance (ADS)

If your fleet is CPDLC-ADS enabled, Boeing has the right training solution for you.
