Flight Training

Recurrent Course

Boeing flight training courses are designed to meet regulatory requirements and the stringent training requirements of airlines. Our flight training solutions are designed by training developers with intimate knowledge of Boeing airplanes and worldwide aviation regulations.

The Boeing Recurrent Course satisfies regulatory recurrent training and proficiency check requirements. This course includes ground and flight training delivered by highly qualified instructors who have gone through a rigorous certification process to ensure the highest caliber of instruction. The Boeing-designed courseware is founded on the intimate knowledge of the airplane's handling and systems. The ground training portion of the course consists of e-Learning focused on the airplane's systems. The flight training portion of the course can take place in a Boeing full-flight simulator, available through our growing global network of training facilities, or in an airline's simulator, and includes an end-of-course check ride.

Value

- Your airline keeps its experienced pilots where they provide the most value, flying instead of instructing
- You have a reliable partner delivering a steady stream of qualified pilots
- Your airline avoids the high costs of developing, purchasing, and maintaining a training program and flight training devices

Course length

3–5 days

Airplane models

717, 737-700/-800, 747-400, 757-200, 767-300, 777-200/-300, 787

Regulatory approvals

Our recurrent courses have FAA and various worldwide approvals.

Prerequisites

- A pilot certificate and a type rating on the model plane that is being trained on
- English-language proficiency
