Flight Training

Shortened Type Rating Course

Boeing flight training courses are designed to meet regulatory requirements and the stringent training requirements of airlines. Our flight training solutions are designed by training developers with intimate knowledge of Boeing airplanes and worldwide aviation regulations.

The Boeing Shortened Type Rating Course saves an airline time and money by offering an effective solution tailored to pilots who have a minimum amount of glass flight deck experience. Our Boeing Shortened Type Rating Course includes ground and flight training delivered by highly qualified instructors who have gone through a rigorous certification process to ensure the highest caliber of instruction. Boeing-designed courseware is founded on intimate knowledge of the airplane's handling and systems. The ground training portion of the course focuses on learning and applying systems knowledge through combining self-paced e-Learning with procedural training in a fixed training device or flat panel trainer. The flight training portion of the course takes place in a full-flight simulator and includes an end-of-course check ride.

Value

- Your airline keeps its experienced pilots where they provide the most value, flying instead of instructing
- You have a reliable partner delivering a steady stream of qualified pilots
- Your airline avoids the high costs of developing, purchasing, and maintaining a training program and flight training devices

Course length

Days dependent on regulatory requirements

Airplane models

737-700/-800, 747-400, 757-200, 767-300, 777-200/-300, 787

Regulatory approvals

Our shortened type rating courses have FAA and various worldwide approvals.

Prerequisites

- A valid airline transport or commercial pilot license
- Multi-engine and instrument ratings for the operation of a commercial multi-engine transport airplane (or equivalent ratings)
- English-language proficiency
- 1,000 hours flight experience
- Previous Boeing glass experience
