

Maintenance and Engineering Maintenance Turn Time

Maintenance and Engineering

Maintenance Turn Time

Maintenance Turn Time is the centerpiece of Boeing's suite of mobile maintenance applications. Maintenance Turn Time allows airlines to quickly identify and resolve non-routine defects, reducing delays and cancellations and improving productivity. Technicians can access Maintenance Turn Time from a mobile device at the airplane to easily and immediately troubleshoot defects. The collaboration feature lets users share information securely in real-time throughout the maintenance and engineering organizations.

Maintenance troubleshooting and decision support information at your fingertips

With Maintenance Turn Time, you can:

- Access and research critical information for troubleshooting non-routine defects at the airplane
- Communicate in real time with maintenance and engineering personnel during troubleshooting
- Integrate with Toolbox Mobile Library for reference documents and Toolbox Mobile Parts for part availability
- Access aircraft maintenance history
- Add photos to a case from your mobile device
- Record damage on a 3D image

Key notes:

Requires wireless connection to the ground system

Key benefits:

- Problem-solving at the airplane for faster turnaround times
- Integration with airline maintenance system
- Immediate central visibility into maintenance defects
- Mobile and desktop access to critical maintenance information
- Secure, dependable system for technician collaboration
- Intuitive and easy-to-use interfaces
