# Airline Operations

Airlines operate in a highly competitive and complex environment with numerous challenges. Maximizing operational efficiency is key to success. Through its performance assessments and diagnostics, Boeing Professional Services helps airlines benchmark their business operations against industry best practices to strategically leverage strengths and close performance gaps. Our experts help identify, implement, and sustain new business processes to increase efficiency and reduce costs.

---

Fleet-agnostic, consultative recommendations for operational efficiency

### The Airline Operations practice offers the following consulting services:

#### Airline Operations Assessment

- Functional operations gap analysis
- Assess business plan against organizational alignment and resources
- Review and augment regulatory support
- Airline operations modelling

#### Operations Control Center Integration

- Communication structure design
- Data collection and organization improvements
- Employee development and training
- Organization alignment

#### Delay and Disruption Analysis

- Identification of delay cost drivers
- Quantification of actual costs

#### Fuel Efficiency

- ETOPs implementation support
- Fleet performance benchmarking
- Flight planning and execution optimization
- Fuel efficiency monitoring tools
- Process and policy alignment
