Systems Upgrades

Complete Operations Wi-Fi OnGround Cellular Data

Boeing Modification Services keep airplanes up to date and operating efficiently.

Complete Operations Wi-Fi enables communication scalability

Complete Operations Wi-Fi provides an on-ground Wi-Fi access point that bridges data to a 3G cellular modem to provide Internet and network access.

Example list of supported devices

- Electronic Flight Bag data transfers
- Tablet devices – iPad, Android, Windows operating systems supported
- Security systems
- Camera monitoring systems

Key benefits

- 98 percent world coverage at local data transfer rates
- All levels of encryption and security are supported
- Multiple-SSID capable, enabling multiple access points from one airplane interface device
- Capable of 802.11 b/g/n industry-standard protocols
