Flight Training

Differences Course 777 to 787-8

Boeing flight training courses are designed to meet regulatory requirements and the stringent training requirements of airlines. Our flight training solutions are designed by training developers with intimate knowledge of Boeing airplanes and worldwide aviation regulations.

We offer a Boeing 777 to 787-8 Differences Course that familiarizes 777 qualified crew with the differences between their base airplane model variant and the 787-8 model variant. This course is taught by Boeing qualified instructors who have gone through a rigorous certification process to ensure the highest caliber of instruction. The Boeing-designed courseware is founded on the intimate knowledge of the airplane's handling and systems. The ground training portion of the course focuses a pilot on learning and applying systems knowledge through combining self-paced e-Learning with procedural training in an advanced flight training device (FTD). The flight training portion of the course can take place in a Boeing full flight simulator (FFS), available through our growing global network of training facilities, or in an airline's simulator, and includes an end-of-course check ride. FTD and FFS sessions use computer-based briefings that allow trainees to demonstrate their specific level of content comprehension for more tailored training sessions. FFS sessions include advanced debriefings that allow for recorded playback of the flight deck and panel instrumentation for more focused instructor/student debriefs through the visualization of key training moments.

Value

- Your airline keeps its experienced pilots where they provide the most value, flying instead of instructing
- You have a reliable partner delivering a steady stream of qualified pilots
- Your airline avoids the high costs of developing, purchasing, and maintaining a training program and flight training devices

Course length

5–7 days

Regulatory approvals

Authorization from your regulatory authority is required to receive credit for this training.

Prerequisites

Current and qualified on the 777

Price
