Material Services

The Emergent Build Center (EBC)

Your operations require every advantage possible to increase efficiency. The Boeing Edge is all about bringing your airplanes, operations and business those advantages and making your teams successful.

The Emergent Build Center (EBC) is part of the Material Services set of offerings and is focused on helping you get the right part to the right place at the right time. No matter how old your airplane is or how obscure the part you need, we are there to help you keep your airplanes where they belong—in the air earning revenue.

Of the nearly 11,000 Boeing airplanes flying around the world more than half are no longer in production. Most have not been produced in years. If you need a part for one of these out-of-production airplanes our highly skilled rapid response team is ready to support you around-the-clock. We continue to invest in our capability—and the processes needed—to build parts quickly for your out-of-production, unplanned parts requirements.

Material Services

The Emergent Build Center

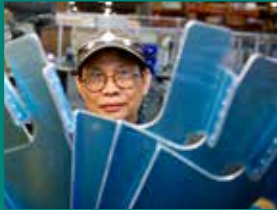

“If our customers are AOG, they’re not profitable. The extensive capabilities of our team saves the customer a lot of time and keeps their airplanes flying” Mike Meraz, team lead, Emergent Build Center Fabrication Center.

As part of the investment to support the out-of-production fleet, the EBC has a rapid response fabrication center designed around lean principles that allows the team to build products with reduced lead times. When customer’s orders are filled from the rapid response fabrication center, they get the parts they need in days, not months. The EBC rapid response fabrication center is embedded within the Garden Grove Distribution Center (Los Angeles area) enabling immediate shipment to all domestic and international customers.
