

# Maintenance Performance Toolbox Tasks Module

# Tasks Module

The Tasks module supports two key maintenance objectives for your airline: Job Card Management and Maintenance Program Management. With Job Card Manager, you are able to incorporate your airline's job cards into Boeing's task cards. In addition, you can create job cards from Boeing-issued Service Bulletins.

---

## Simplify Customization of Maintenance Tasks

Job Card Manager is designed to help your airline:

- Keep job cards in sync with Aircraft Maintenance Manual (AMM) and Boeing task card revisions
- Use the Service Bulletin accomplishment instructions as a basis for the creation of a job card
- Assemble job cards to specific aircraft, locations and schedules
- Export task card content for input into maintenance planning ERP systems

### Key benefits of Job Card Manager

- Elimination of duplicate data entry through synchronization with AMM and Boeing task card
- Reduced turnaround time of revision incorporation
- Sync release of line and routine cards to end users

Incorporating Maintenance Program Management as part of the module extends your ability to build customized programs that match the maintenance needs of your fleet.

Maintenance Program Management allows your airline to:

- Develop a maintenance program based on the Maintenance Planning Document (MPD) and include airline-specific requirements
- Maintain the airline maintenance program to remain in sync with changes to the MPD
- Simplify development of a maintenance program to support new model entry into service (EIS)
- Increase aircraft availability through customized maintenance program
- Improve regulatory compliance through consolidated maintenance program tracking and reporting
